Name: Jihui.Sheng

Course: Cpts_443

The purpose of going to university is to gain more knowledge, accumulate the skills learned and turn them into your own abilities. Provide the necessary foundation for future occupations.

The user interface design in this computer science course is what must be learned in human-computer interaction, and it is also a core point that must be learned in computer learning. The user interface is equivalent to the link between computers and humans. Help people to use the program better and more conveniently. Learning how to better human-computer interaction is what we need to learn, which allows computer programs to better help people.
